SUMMARY

Software Engineer (SDE I) with hands-on experience developing secure, tested, production ready applications. Skilled in Python, FastAPI, Node.js/TypeScript, React and SQL with a record of debugging across the stack, documenting systems and delivering to clients in Agile teams.

EDUCATION

B.E. Information Technology — Specialization in AI/ML 2022 – 2026
Trinity Academy of Engineering, Pune GPA: 7.47/10

TECHNICAL SKILLS

Programming: Node.js, React, FastAPI
AI/ML: RAG, LangChain, LLM applications, NLP, Transformers, Agent2Agent Protocol
Databases: SQL, Postgres, MongoDB

EXPERIENCE

SDE I - AI Developer Jan 2026 – Present
Dexpert Systems Pvt. Ltd.

- Rebuilt document processing around an LLM, lifting accuracy from 70% to 95% and cutting turnaround from about 2 minutes to under 30 seconds.
- Built an LLM-powered module for a multi-tenant platform that generates campaigns, builds target audiences and publishes automatically, enabling end-to-end automated campaign execution across tenants.
- Designed and built a complete HRMS module for a pan-India operation, covering employee and account management, invoice and purchase order workflows and client requests, with role-based access across 20+ roles, automatic escalation of delayed approvals and audit logs. Replaces paper-based processes with an estimated 2+ hours of manual work saved per day.

Python Full Stack Intern Oct 2025 – Dec 2025
FitFare

- Developed a chatbot with contextual memory and NLP-based response generation to support personalized multi-turn conversations.
- Built query-routing and workflow-automation pipelines that reduced manual handling and improved response speed and consistency.

PROJECTS

RAG-Based Search Engine *LangChain, RAG, FastAPI*

- Built a Retrieval-Augmented Generation search platform integrating FAISS vector search and multi-provider retrieval pipelines.
- Developed hybrid ranking using Sentence Transformers embeddings with keyword relevance scoring to improve retrieval accuracy, served through FastAPI services for search orchestration and citation backed answers.

RehabAI – AI-Powered Rehabilitation Assistant *LSTM, OpenCV, TensorFlow*

- Automated exercise monitoring with an LSTM activity recognition model and an OpenCV/MediaPipe pose estimation pipeline, enabling real-time repetition counting and movement-deviation detection.

RECOGNITION & LEADERSHIP

- Smart India Hackathon 2023 – National Finalist.
- Avishkar 2024 – Zonal Achiever; top-tier finishes across 5+ hackathons.
- Organized Trinovate Synergy, a state-level technical event with 150+ participants.
- Data Science Club Lead – conducted AI/ML workshops and mentored peers on AI/ML projects.
